

WEB DEVELOPMENT (INTRODUCTION)

WEDE5020

PART 1 — WEBSITE PROJECT PROPOSALS

Student Name: Phokela Ramokone Fortunate

Student Number: ST10529266

Date: 11 August 2026

Two complete website project proposals are provided below for lecturer consideration.

Proposal 1: B3 Concept

1. Organisation Overview

B3 Concept is a South African interior and graphic design practice. It states that it was founded in 2015 as a small startup providing interior design services to residential clients and later expanded to residential, commercial and retail environments. Its identified service areas include Cape Town, Johannesburg and Durban. Services include space planning, interior staging, custom furniture and joinery, project management, consulting, 3D rendering, corporate identity, website design and property development (B3 Concept, 2026).

2. Website Goals and Objectives

- Present services in a clear hierarchy so prospective clients can understand the available solutions.
- Explain the organisation's history, mission and design approach to build trust.
- Generate qualified project enquiries by collecting service, location, budget, date and project requirements.
- Separate project enquiries from general contact messages.
- Present the three South African service areas clearly.
- **KPIs:** relevant page visits, completed enquiries, completed contact messages, successful navigation tests and completion of all planned pages.

3. Current Website Analysis

The existing website provides substantial factual information, a broad service offering and a three-stage design process (B3 Concept, 2026). The academic site improves information architecture rather than claiming that the existing site is unusable. Services will be grouped on a dedicated Services page, organisational information on About Us, and project requirements on an Enquiry page. Contact will separate general communication from project enquiries and identify the three service areas.

4. Proposed Website Features and Functionality

- **Home:** hero/introduction, service summary, three-stage design process, service areas and calls to action.
- **About Us:** history, mission, approach, leadership and supporting organisational information.
- **Services:** structured interior, space, project and business-related service categories.
- **Project Enquiry:** name, email, phone, service, location, budget, project date and project details.
- **Contact:** general contact information, separate message form and Cape Town, Johannesburg and Durban service areas.
- Consistent navigation across all five pages and semantic HTML5 structure.

5. Design Aesthetic

The proposed aesthetic is modern, minimal and portfolio-led. A restrained palette of warm off-white, charcoal, soft stone and muted sage can be introduced during CSS development so that interior imagery remains the visual focus. Clean sans-serif typography, generous spacing, clear headings and direct calls to action will support readability. Accessibility will be supported through logical heading order, descriptive links, labelled forms and meaningful alt text.

6. Technical Requirements

- HTML5 for Part 1.
- Visual Studio Code for development.
- Git and a private GitHub repository for version control.
- Browser testing and HTML validation.

- A .co.za domain and shared hosting are planned for later deployment.
- External map links for service areas; interactive mapping is reserved for a later stage.

7. Timeline and Milestones

- Week 1: research and audience analysis.
- Week 2: proposal, sitemap and wireframes.
- Week 3: five HTML pages and navigation.
- Week 4: link, form and HTML testing.
- Week 5: README, references, evidence and submission.

8. Budget

A .co.za domain was listed by xneelo at R105/year and basic web hosting from R99/month at the time of the planning research. This gives an estimated first-year technical cost of R1,293. A R500 maintenance contingency gives an estimated planning total of approximately R1,793 (xneelo, 2026).

Proposal 2: The Cape Bakery

1. Organisation Overview

The Cape Bakery is a Cape Town bakery that sells freshly baked cakes, cupcakes and sweet treats. Its official website promotes online shopping, delivery and in-store collection and lists products including Bundt, Gateau, High, Low, Occasion, Bento, Devonshire, Buttercream, Compact, Square and Sliced cakes, as well as cupcakes, tarts, sweet treats and sponges (The Cape Bakery, 2026).

2. Website Goals and Objectives

- Make the product range easy to discover through a dedicated Products page.
- Provide clear information about the bakery and its target customers.
- Give customers a dedicated product enquiry route before ordering.
- Provide a separate general contact route.
- Create an HTML foundation for later CSS and JavaScript enhancements.
- **KPIs:** relevant page visits, completed enquiries, completed contact messages, successful navigation tests and completion of all planned pages.

3. Current Website Analysis

The existing website provides a broad product range together with online ordering, delivery and collection information and contact details (The Cape Bakery, 2026). For the academic project, the main opportunity is to reorganise information into the required page architecture. A dedicated About page separates organisational information from products, an Enquiry page provides a focused route for questions, and Contact provides general communication details.

4. Proposed Website Features and Functionality

- **Home:** bakery introduction, product highlights, calls to action and links to Products and Enquiry.
- **About Us:** bakery purpose, customer focus and supporting business information.
- **Products:** structured cake and treat categories with clear product descriptions.
- **Product Enquiry:** customer details, selected product, quantity, preferred date and special requirements.
- **Contact:** business contact details, delivery/collection information and general message form.
- Consistent navigation and semantic HTML5 elements including headings, paragraphs, lists, labels and forms.

5. Design Aesthetic

The proposed aesthetic is warm, welcoming and bakery-focused. A later CSS stage can use a restrained warm palette, clear typography and strong food photography. Product information will use short, scannable sections so customers can quickly identify products and contact options. The HTML stage establishes structure while CSS and JavaScript remain reserved for later stages.

6. Technical Requirements

- HTML5 for Part 1.
- Visual Studio Code, Git and a private GitHub repository.
- Browser testing and HTML validation.
- A .co.za domain and shared hosting are planned for later deployment.
- Image assets must have a recorded legal/licensing source.

7. Timeline and Milestones

- Week 1: research and content gathering.
- Week 2: proposal, sitemap and wireframes.
- Week 3: five HTML pages.
- Week 4: navigation, form and structure testing.
- Week 5: README, references, evidence and submission.

8. Budget

A .co.za domain was listed by xneelo at R105/year and basic web hosting from R99/month at the time of the planning research, giving an estimated first-year technical cost of R1,293. A R500 contingency gives a planning total of approximately R1,793 (xneelo, 2026).

Low-Fidelity Wireframe Content Blocks

- **Home:** logo/site name, navigation, hero/introduction, calls to action, service summary, design process, service areas, footer.
- **About Us:** navigation, title, history, mission, approach, reasons to choose the organisation, leadership, footer.
- **Services:** navigation, title, introduction, service categories, enquiry call to action, footer.
- **Enquiry:** navigation, title, project form, customer details, service/location/budget, date/details, submit/clear, footer.
- **Contact:** navigation, title, contact details, Cape Town, Johannesburg, Durban, general message form, footer.

Implementation Note

The two proposals are separate organisation options. The lecturer should approve the organisation selected for implementation. The accompanying content-research document contains separate research for both organisations.
